

Expanded Access Policy

The purpose of this policy is to announce the status of Expanded Access for the investigational Autologous Cultivated Limbal Stem/Progenitor Cell (cLSC) product from the Cornea Biology laboratory (Sponsor: Dr. Sophie X. Deng) available to patients outside of the clinical study.

While we aim to help patients, please know that at this moment we cannot offer access to the investigational cLSC product due to limiting circumstances that prevent us from providing compassionate use to an unapproved medicine. For additional information about this policy please contact us at:
